

NYC Taxi Streaming Pipeline — Streaming Run Report

Run evidence

This report documents the evidence required by the capstone. Runtime-generated lake/, checkpoints/ and logs/ directories are intentionally excluded from the submission package. Execute `run_pipeline.py --profile v2 --load-source --limit N` and capture the generated counts, Kafka lag/offsets, quarantine samples and restart/recovery evidence here.

Recovery demonstration

1. Record Bronze/Silver/Quarantine/fact counts and Kafka offsets. 2. Interrupt a streaming stage. 3. Restart using the same checkpoint and consumer group. 4. Verify the restart resumes from committed offsets/checkpoints. 5. Re-run fact load and confirm ON CONFLICT prevents duplicate trip_key rows. 6. Reconcile counts before and after recovery.
